SOFTWARE DEVELOPMENT PROPOSAL

Foreign Abacus Education Exam Software

A centralized examination management platform designed for multiple institutes and franchises to conduct secure, flexible and institution-specific Abacus examinations through one scalable system, with online payment and automatic enrollment.

Developed by ERPLI | Delivery: Within 12 Days | Platform: Web Based | Total Cost: ₹40,000 | Date: 11 October 2026

01 / OVERVIEW

Project Overview

ERPLI proposes to develop a dedicated online examination platform for Foreign Abacus Education. The platform will support institutions, franchises, automated paid enrollment, students, practice exams, live examinations, commission management, WhatsApp/email notifications and institution-specific examination configuration from one centralized system.

The objective is to make it possible for multiple institutes and franchise partners to participate in the same examination ecosystem while still allowing separate exam papers, schedules, participant management and commission calculations for each organization.

12

Days planned development and completion period for the mutually finalized feature scope.

02 / SCOPE

Core Software Features

The agreed development scope includes the following modules. Each module is described below so both parties have a clear and shared understanding of what will be delivered.

01 Multi-Institute & Franchise System

One central platform where Foreign Abacus Education can onboard and manage multiple institutes and franchise partners, each operating within its own space.

- Super admin panel to create, edit, activate or deactivate institutes and franchises
- Separate login for each institute/franchise to manage its own students
- Each institute sees only its own students, exams and data
- Central admin retains full visibility across all institutes

02 Participant-Based Commission System

Automatic commission calculation for each institute or franchise based on how many students they register or bring into an examination.

- Commission rate configurable per institute/franchise (fixed amount or percentage)
- Calculation based on approved/participating students only
- Commission summary per exam and per institute
- Commission report exportable to CSV for settlement

03 Payment Gateway & Automatic Enrollment

Integrated online checkout automatically registers the student and enrolls them in the selected exam after secure server-side confirmation of successful payment.

- Student registration and exam selection with online payment checkout
- Payment verification using gateway webhook and server-side status checks
- Automatic student ID / account creation and confirmed exam enrollment after successful payment
- Pending and failed payments do not grant exam access; admin can review transaction records
- Duplicate payment callbacks handled safely to prevent duplicate enrollments

04 Coupon Support

Admin can create discount coupons for promotions, scholarships or specific institutes, applied at the time of registration.

- Flat or percentage discount coupons
- Expiry date and usage limit per coupon
- Option to restrict a coupon to a specific institute or exam
- Coupon usage tracking for admin

05 Practice Examination

Students can attempt practice tests before the live exam to get familiar with the interface, question format and time pressure.

- Separate practice papers created by admin
- Same exam interface as the live examination
- Instant score shown after submission
- Practice attempts do not affect final results

06 Secure Live Examination

The live exam includes practical browser-level controls to discourage cheating and keep the exam fair across all institutes.

- Full-screen mode required during the exam
- Tab-switch / window-leave detection with warnings and logging
- Right-click, copy-paste and text selection disabled
- Single active session per student (no parallel logins)
- Auto-submit when the timer ends
- Question and option shuffling (where applicable)

07

Institution-Specific Question Papers

Different institutes can be given different question papers for the same exam, reducing the chance of papers being shared between centres.

- Create multiple paper sets for one exam
- Assign a specific paper set to each institute
- Supports abacus-style numeric and multiple-choice questions
- Question import via CSV for faster paper creation

08

Different Exam Time Intervals

Each institute can be given its own exam date, start time and access window, useful for different time zones, batches or centre availability.

- Set start time, end time and exam duration per institute
- Students can only start the exam within their assigned window
- Countdown timer visible to students during the exam

09

CSV Data Import

Bulk upload of records through CSV files instead of entering them one by one.

- Import students, institutes and questions
- Sample CSV template provided for each import type
- Validation with clear error messages for incorrect rows
- Duplicate record checks before saving

10

CSV Data Export

Export key data to CSV for reporting, record keeping, certificates or offline analysis.

- Student lists and registration status
- Exam results with scores, per institute or overall
- Commission and coupon usage reports
- Filters by exam, institute and date before export

11

WhatsApp API Notifications

Automated WhatsApp updates for students and participating institutions, using approved templates and a connected business messaging provider.

- Registration and successful payment confirmation
- Student exam enrollment and exam schedule notifications
- Exam reminders and result availability updates
- Message delivery log, opt-in management and retry handling

12

Email Notification Support

Automatic transactional email notifications to students and relevant administrators through a connected email service.

- Registration and payment receipts / confirmations
- Account access and exam enrollment details
- Exam schedules, reminders and result announcements
- Notification templates and delivery-status visibility

03 / WORKFLOW

Proposed Examination Workflow

1

Institute Setup

Admin configures institutes, franchises, exams and available time slots.

2

Student Registration

Student submits details, selects an exam, and proceeds to secure online payment.

3

Automatic Enrollment

Confirmed payment creates or updates the student account and enrolls the student.

4

Notifications

WhatsApp and email deliver confirmation, exam instructions and reminders.

5

Exam & Results

Student attempts practice/live examinations; authorized admins review results and reports.

04 / DELIVERABLES

Included & Excluded Scope

✓ Included

- ✓ Multi-institute examination structure
- ✓ Franchise participation
- ✓ Participant-based commission functionality
- ✓ Secure payment gateway and automatic registration / exam enrollment
- ✓ Coupon support
- ✓ Practice examinations
- ✓ Live exam security controls
- ✓ Institution-specific exam papers
- ✓ Institution-specific exam schedules
- ✓ CSV import and export
- ✓ WhatsApp API notification integration
- ✓ Transactional email notification integration
- ✓ Payment transaction and notification reporting

× Not Included

- × Advanced live video proctoring or guarantees of cheating prevention
- × Third-party gateway transaction fees, WhatsApp conversation/template fees, and email provider charges
- × Features that are not approved before project confirmation
- × New modules requested after the approved scope is frozen
- × Unlimited design or functional revisions

05 / TIMELINE

Development Timeline

Project completion within 12 days

ERPLI will target completion of the mutually agreed and finalized feature scope within 12 days from the confirmed project commencement date.

12
DAYS

06 / TERMS

Project Terms & Conditions

01

Development Delay Deduction

If ERPLI is unable to complete the mutually decided features within the agreed development period due to reasons attributable to ERPLI, then **₹500 will be deducted from the billing amount for each day of delay.** This deduction applies only to the features that were finalized and agreed upon before project commencement.

02

Payment Delay Charge

If the client does not make the agreed payment within the mutually agreed payment due date, then **₹500 will be added to the billing amount for each day of payment delay.**

03

Revision Policy

Up to **3 revisions** related to the approved functionality/design scope will be provided without an additional revision fee. Any revisions beyond the first three may be charged separately depending on the work required.

04

Feature Scope Freeze

Once the proposal and project feature list have been confirmed, the project scope will be considered finalized. New features, modules or options requested afterward will not automatically be included in the existing quotation or timeline.

05

Additional Feature Requests

Any new feature or functionality requested after proposal confirmation may require a separate quotation, revised timeline and additional development charges.

06

Client-Side Delays

Delays caused by late approvals, missing information, incomplete content, credentials, data, feedback or other dependencies from the client will not be counted as ERPLI development-delay days.

07

Third-Party Service Requirements

The client will provide or authorize verified payment gateway merchant credentials, WhatsApp Business API access, approved message templates and an email delivery account. Provider approval, message delivery and settlement times depend on those services.

08

Usage Charges and Compliance

Gateway transaction fees, WhatsApp messaging fees and email service usage charges are billed by the respective providers and are not included in the ₹40,000 development fee. Automated WhatsApp messages require valid user opt-in and approved templates where applicable.

!

Important Scope Confirmation

The 12-day delivery commitment and ₹500/day development-delay deduction apply only to the features explicitly confirmed in this proposal. Any later addition, modification or change in requirements may affect the timeline and project cost.

07 / BILLING

Total Billing Amount

Project Development Cost

The total billing amount for the complete development of the Foreign Abacus Education Exam Software, inclusive of all features listed in this proposal, is **₹40,000 (Forty Thousand Rupees Only)**.

₹40K

TOTAL COST

---

08 / STAGE-WISE PAYMENT SCHEDULE

The total project cost of ₹40,000 will be paid in four stages linked to project progress. Each stage is due within 2 days of the milestone being completed and shared with the client.

01

Advance Payment — ₹5,000

Paid before the project starts. The 12-day timeline begins after this payment is received and the scope is confirmed.

02

Core Modules Demo — ₹10,000

Due after a demo of the institute/franchise system, student registration, successful-payment auto-enrollment, gateway integration, WhatsApp/email notification setup and CSV import.

03

Exam Modules Demo — ₹10,000

Due after a demo of practice exams, the secure live exam, institution-specific papers and schedules, commission, coupons and CSV export.

04

Final Handover — ₹15,000

Due after the approved revisions are completed and the software is live and handed over to the client.

₹

Total: ₹40,000 (Forty Thousand Rupees Only)

The ₹500/day payment delay charge applies to each stage from its due date. Work on the next stage may be paused until the pending stage payment is received, and such pause days will not count as ERPLI development delay.
